

Beyond Parabens & Phthalates:

A Happy Skin Guide

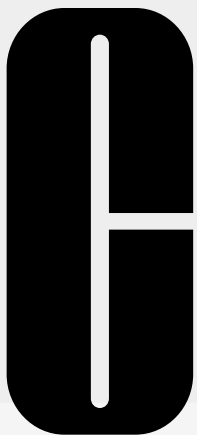

Our Clinique Clean Philosophy.

Your skin is safe here.

Every Clinique product is built on 50 years of research and thoroughly tested to ensure it meets the highest standards for safety and efficacy.

We avoid using allergens, irritants and ingredients in ways that age or harm skin, yet never sacrifice results.

No parabens.
No phthalates.
No fragrance.
Just happy skin.

How Clinique Defines

Definitions of ingredients for clear answers.

Vegan.

We define vegan formulas as ones that do not contain any animal-derived ingredients or products derived from animal matter, including but not limited to: meat, fish, poultry (including eggs, feathers - down), lactose (including milk, cheese, yogurt), wool (including lanolin & its derivatives), honey, beeswax, gelatin, collagen, silk, leather, and carmine.

Synthetic Colours.

Synthetic Colours are dyes, pigments, or other substances that can impart color when added or applied to a food, drug or cosmetic. We use synthetic colours that are approved by regulatory bodies everywhere our products are sold, including the U.S. Food and Drug Administration (FDA) and European Union Cosmetic Directive, and have a long history of safe use.

Gluten.

We define gluten ingredients as wheat (spelt), rye, barley, and triticale. Products that are gluten-free do not include these ingredients.

Alcohol.

At Clinique, we recognize that there are two scientific classifications of alcohols. **Denatured Alcohols**, which are described as the drying type of alcohol, are often used to purify the skin and are excellent degreasers for oilier skin types. They tend to give a cooling effect because they quickly flash off the skin. There is a perception that this type of alcohol can be overly harsh and stripping to skin. This is true if overused, however, we don't believe this should be a concern for our clients as we balance our formulas for each skin type and concern. The other type of alcohol, which is described as **fatty alcohols** (such as cetyl alcohol), are a waxy solid at room temperature and often used as an emollient and to add texture and body to formulas. Fatty alcohols are vastly different in feel and benefit to Denatured Alcohols.

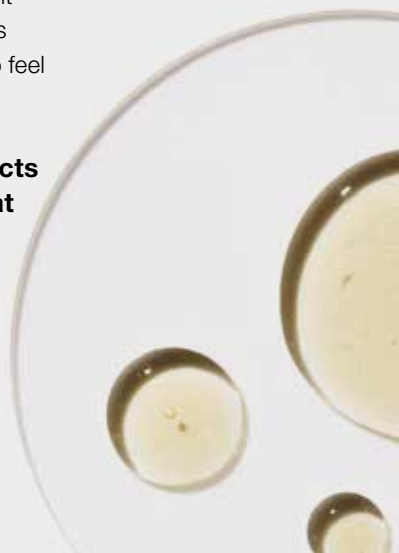

Oil.

Oils are defined as triglyceridea that are liquid at room temperature and insoluble in water. They may also be specified as traditional or fixed oils, such as sunflower seed oil.

Sulfates: Sodium Lauryl & Sodium Laureth Ether Sulfate.

Sulfates, such as Sodium Lauryl Sulfate (SLS) and Sodium Laureth Ether Sulfate (SLES), are efficient cleansers and degreasers. In cleansers, they function as surfactants: water- and oil-soluble compounds that, when combined with water, foam and emulsify greasy substances. Both SLS and SLES have been reviewed quite thoroughly, and found to be safe when used as intended. We do not use Sodium Lauryl Sulfate (SLS) in any of our cleansers, but do use them in a few makeup products to aid in the viscosity and balance the pigment load of formulas. We do use Sodium Laureth Ether Sulfate (SLES) in select cleansers as we believe that it is quite effective for cleansing the skin. Unless you have a known irritation, we don't believe there is a need to feel uncomfortable with this ingredient.

The following pages each correspond to the ingredients above and list Clinique products that do not contain that specific ingredient or category of ingredients. Please note that these lists are accurate to the best of our knowledge as of Spring 2020.

Vegan.

ARE WE UPDATING OUR POSITION AROUND ALLERGY-TESTING?

Yes! We've recently expanded our point of view to go beyond the Power of One to be inclusive of our holistic Allergy Science formulating approach. We have a long history of science-based formulation development to the best results for skin and we want to tell that impressive story. One thing we're not changing is our logo lock-up and the brand statement – Allergy Tested, 100% Fragrance Free.

WHAT INGREDIENTS DOES CLINIQUE CHOSE TO FORMULATE WITH OR WITHOUT?

Clinique has always been extremely vigilant about what we will and will not include in our products. We avoid using allergens, irritants and ingredients in ways that can age or harm skin. We have stringent allergy testing procedures to ensure that everything our consumer touches is poised to create happy skin.

On Parabens: Parabens are chemical preservatives found in foods, drugs and cosmetics. Clinique has removed all parabens from our products as of July 1, 2018. Even without parabens, we take the steps to ensure our products are appropriately preserved against the growth of bacteria, yeast and mold.

On Preservatives: At Clinique, we use a variety of approved preservatives in our products in accordance with all regulations and laws. These preservatives are recognized to be both safe and necessary as they are designed to protect against the growth of bacteria, yeast and mold during storage and consumer use. We use the appropriate amount of approved preservatives to ensure our products remain safe.

On Phthalates: Phthalates are a chemical ingredient typically used in formulas to help blend two or more ingredients together. They are regularly found in fragrances, nail polish, hair sprays, aftershave lotions, soaps, and shampoos. Clinique has removed all phthalates from our products as of July 1, 2018.

On Fragrance: Fragrances are considered allergenic ingredients in cosmetics. Clinique was the first 100% Fragrance Free brand in the industry. We have always and will continue to formulate without fragrance.

* For more information on ingredients, please visit our ingredient glossary on Clinique.com launching in July 2018.

ARE YOU REMOVING PARABENS AND PHTHALATES BECAUSE YOU'RE REQUIRED TO?

Just like in science, the regulatory environment – comprised of regional and national regulatory bodies around the world – moves quickly. We weren't required to remove all parabens and phthalates from our formulas; we chose to after hearing our consumers concerns. We removed them without compromising what our client's expect from our formulas. It's our mission to ensure that everything our consumer touches is poised to create happy skin.

ARE WE PLANNING TO REMOVE OR FORMULATE WITHOUT OTHER INGREDIENTS IN THE FUTURE?

In the swiftly-moving scientific and regulatory environment, it can be hard to make definitive statements, but here is what we promise:

- Our goal will always be to deliver what's best for skin: we will never compromise on safety and science.
- We will remain incredibly attentive to the latest ingredient research as well as consumer sentiment, preferences and concerns.
- Any decision we make will be in conjunction with our Guiding Dermatologists' advice.
- And we will always be transparent about new ingredient positions we take as a brand.

WHAT IS ALLERGY SCIENCE, OUR MODERNIZED APPROACH TO SAFETY TESTING?

Our commitment to rigorous allergy testing has generated deep knowledge of skin physiology and a unique allergy test database that no competitor can easily duplicate. Due to innovation in our Product Development and Research & Development practices, we have been able to evolve our ability to create safe and efficacious products under the Allergy Science approach.

Allergy Science is a blend of three elements:

1. 50+ years of Allergy Testing data that provides enhanced ability to formulate with appropriate levels and combinations of ingredients to minimize the potential for reaction.
2. The most recent science of skin biology, the environment, consumer behaviors, and product usage.
3. Allergy Testing on formulations; 100 people, 12 times each, 1,200 applications. If one of these applications causes a reaction, we reformulate.

Clinique recognized the benefit of going beyond industry standards and working with our guiding dermatologist to establish our Allergy Testing. This testing served the brand well in the changing beauty and environmental landscapes of the past 50 years; however, as the world is evolving, so too must our approach to creating safe formulas. By adopting an Allergy Science approach, Clinique is able to formulate with even more precision for maximum efficacy while minimizing the potential for allergic reaction.

HOW DO YOU EVALUATE NEW INGREDIENTS?

Our scientists and formulating chemists continuously draw on the latest peer-reviewed scientific research to assess our ingredients. Ingredients are then rigorously evaluated for safety and allergic potential by a team of toxicologists and safety experts.

WHY IS CLINIQUE MOVING TOWARDS AN ALLERGY SCIENCE APPROACH?

Clinique's new approach utilizes the best of both modern skin science and our brand's unique allergy testing database to provide allergy assessments with increased sensitivity. Adopting these methods positions Clinique to remain the leader in allergy testing.

DOES THIS MEAN THAT WE CAN'T SPEAK TO 7,200 APPLICATIONS ANYMORE?

Yes, we'd prefer you move away from making that statement to consumers. Our Allergy Science approach and new safety statements are a more modern way of speaking to our comprehensive safety practices. Allergy Science leverages our vast allergy testing database (7,200 applications on ingredients and products for over 50 years), builds on the in-depth knowledge of skin biology we've acquired, and punctuates the effort with a robust 100 person RIPT Allergy Test. All future Clinique formulations will be rooted in this powerful formulation philosophy.

WITH THIS NEW MESSAGING, WHAT DO I SAY TO A CLIENT IF SHE HAD AN IRRITATION FROM ONE OF OUR PRODUCTS?

All our product formulas undergo extensive evaluation; however, some people experience individual reactions to a great variety of things. Certainly, none of this lessens our regret to hear of your experience. Please contact Clinique Global Consumer Care at 866-707-2100 so that we can capture the details of your experience, speak with you about your unique skin needs, provide more information about ingredients in your product and assist in providing a refund [if retailers are unable to at store].

WHAT DO I SAY TO A CLIENT THAT ASKS ABOUT OUR ALLERGY TESTING PROCESS?

We now formulate using 50 years of unique allergy testing data plus additional Allergy Testing to ensure safety. If one of our 1,200 patch test applications causes a reaction, we reformulate. Those results are then added into the database to help make our assessment even stronger for the future.

DOES CLINIQUE TEST ON ANIMALS?

Every ingredient and formula sold by Clinique is rigorously evaluated for safety and efficacy using the most up to date non-animal testing alternatives. We do not test on animals and we never ask others to do so for us. Animal testing on our products will occur if, and only if, a regulatory body demands it for its safety or regulatory assessment. We continue to work closely with industry, government and non-profit groups in countries that require animal testing, to eliminate this practice and encourage the acceptance of non-animal testing methods. If you would like more details, we welcome you to contact our Global Consumer Communication's hotline at 866-707-2100.

HOW SHOULD I ANSWER A CLIENT IF HE/SHE ASKS ABOUT OUR ANIMAL-TESTING POLICY?

Our Consultants and/or Field Teams should provide the following response to the Animal Testing question followed by a directive for the client to contact Global Consumer Communications (GCC) for more information. The GCC team is specially trained to deal with delicate situations and any potential escalations that may come as a result of sharing our answers. Please provide the statement precisely as follows and encourage teams to contact GCC if there is a need for additional information:

Every ingredient and formula sold by Clinique is rigorously evaluated for safety and efficacy using the most up to date non-animal testing alternatives. We do not test on animals and we never ask others to do so for us. Animal testing on our products will occur if, and only if, a regulatory body demands it for its safety or regulatory assessment. IS CLINIQUE CONSIDERED A CLEAN OR NATURAL BEAUTY BRAND?

Clinique's mission has always been to deliver the most effective and safe products that create great skin. Product safety starts with the high quality of ingredients, the most current research, and a safety review process that includes thorough evaluation of ingredients and finished products. Want more details?

Clinique's Clean Philosophy, meaning our point of view on "clean":

- **Safe Ingredients.** Clinique was a trailblazer when we launched the first-ever line of dermatologist-developed skin care in 1968. Our approach to ingredients is the same now as it was then: We avoid using allergens, irritants and ingredients in ways that could potentially harm skin. We use a combination of natural and synthetic ingredients all focused on maximum safety. And as ingredient research evolves, so do our products. Clinique's new Allergy Science merges the most recent science of skin biology with our 50+ years of Allergy-Testing Data. This powerful combination means we can formulate with even more precision, maximizing efficacy and minimizing the potential for allergic reactions.

- **Dermatologist Tested & Beyond.** Our products are evaluated at every stage of development to ensure they meet the highest standards for safety and efficacy. Each and every one is thoroughly vetted through a full suite of tests that go beyond Dermatologist Testing and may include stability tests, sensory tests, clinical tests, ophthalmologist testing, and safety in use testing. We test so you don't have to worry.
- **Sustainable Practices.** Our goal is a net zero carbon footprint by 2020. We will continue to bring you the highest quality Clinique products while looking at how we can continue to be more sustainable in the future.

WHAT ARE CLINIQUE'S GOALS FOR SUSTAINABILITY?

Our move towards sustainable packaging is a journey and All About Clean represents the first step. Our goals are reflected in our company goals. We will share our information on our journey through our website. A link will be released.

WHAT IS CLINIQUE'S FIRST STEP IN THIS PROCESS?

The first step of this journey will begin 2020 with the launch of "Clinique All About Clean," when we will re-launch select cleansers that have been repacked in more sustainable packaging containing a percentage of plant-derived plastic and/or post-consumer recycled (PCR) resin, reducing our use of fossil-fueled based plastic and/or virgin plastic on a per-product basis. Specific details are provided in the square box on the back of our cleanser package.

WHAT ARE CLINIQUE'S FUTURE PLANS FOR PACKAGING?

Clinique will continue our journey to evolve our packaging. We will make our packaging more sustainable by taking actions including, for example, moving from non-recyclable material to recyclable material and increasing our use of PCR. In addition, we will utilize FSC-certified paperboard for our secondary packaging, which ensures the material is derived from responsibly-managed forests. Our goals are reflected in the goals of our parent, The Estee Lauder Companies. We will share information on our journey through our website. A link will be released.

WILL NEW SUSTAINABLE PACKAGING AFFECT FORMULA EFFICACY?

Our new packaging will not impact the overall quality or performance of our formulas.

HOW WILL I KNOW IF A PRODUCT IS IN A MORE SUSTAINABLE PACKAGE?

If you see the Clinique Clean Seal on your package, you'll know that we have used more sustainable packaging. Please refer to your individual package to learn more about the ways in which it is sustainable.

WILL PACKAGING BE DIFFERENT IN APPEARANCE?

Maybe! Because PCR is sourced from recycled plastics you may notice minor variations in appearance and colour. These visual variations will only occur on a small percentage of bottles, are purely cosmetic and don't affect the function of the packaging or efficacy of the formula within. We are actively working to increase packaging uniformity, but also believe the benefits of using a more sustainable and environmentally friendly material outweigh any minor cosmetic differences.
